

The AI Product Crafting Lab

Quick guide

From idea to a working product, in plain words — Codex does the building.

Boilerplate to add on Codex: [SharePoint](#) — AI Summit 18 Jun

1 Codex setup

- Open **Codex** (the "Ask anything" window).
- Open the **boilerplate folder** inside Codex (download it from the SharePoint link above first).
- Set approval to **"Approve for me."**
- Check the bottom row: project **Capgemini Boilerplate**, **Work locally**, branch **main**.

2 Run `/kickoff`

- Type `/kickoff` → pick the Capgemini boilerplate.
- Let it install and run. It opens a **live preview** — keep it open.

3 Build your Master Prompt

- Open the **Master Prompt builder:** <https://iq-capgemini-ai-crafting-lab.vercel.app/>
- Answer its questions: **who it's for**, the **one job**, the **flow** (open → do the thing → done).
- **Copy** the Master Prompt it gives you.

4 Paste & first preview

- Paste the Master Prompt into the Codex chat and send.
- Let it build, then **try the app** in the preview.

5 Reiterate & build

- Loop: **see it** → **decide** → **ask in plain words** (e.g. "Make the Save button bigger").
- Something off? **Screenshot it, paste it, say what's wrong.**
- You direct, Codex builds. Keep going until you're happy.

Stuck? Call a coach — [Teo Dagher](#), [Teo Paquet](#), or [Arman Amini](#).

If you want to go further...

To add AI features to your app or site, you might need an API key. Feel free to ask a coach for help.
